

## Where China's solar subsidies are funded

When will China stop subsidizing solar projects?

Effective August 1, 2021, China will stop subsidizing new solar farm projects, distributed solar projects for commercial users, and onshore wind farms. For years, China had been generous towards wind and solar projects.

Why are Chinese government subsidies for solar power a problem?

Government subsidies for solar power have also been attributed to over construction, as many solar power projects have been funded by the Chinese government but do not operate at full capacity due to the inability to transfer the full energy capacity from production sites.

How will China's solar energy subsidy budget change in 2020?

In 2020, the Ministry of Finance of the People's Republic of China slashed the solar energy subsidy budget down to 1.5 billion yuan (\$233 million) from 3 billion yuan in 2019. With the auction-based system, companies are to submit subsidies bids for solar power construction projects to the National Energy Administration.

Which countries subsidize solar power plants?

Low and Abrahamson (1997). As the same as Europe (EU), the United States of America (USA) and Japan, China launched a national solar subsidy program in June 2009, named Golden Sun Program, which subsidized 50% of investment for solar power plants, with a total amount of 10 billion RMB (1.6 billion USD).

Why did China cut solar subsidies?

The motivation behind the cut was that China wanted to ensure the local solar industry was economically sustainable over the long term. However, more recently, China's finance ministry committed to granting 57 percent more subsidies to solar power projects this year, but cut subsidies for wind power.

Will China increase solar and wind energy subsidies in 2021?

China has stated that it aims to increase the energy share of solar and wind energy to 11% by the end of 2021. Renewable energy subsidies for 2021 for increased, with subsidies for solar power having increased more than subsidies for wind energy.
